

Practical-4

Problem 1 :

1. **Problem:** Difficulty in inserting a node at a specific position.
Solution: Traversed the list to the required position and adjusted the next pointers.
2. **Problem:** Position greater than the list length.
Solution: Checked for NULL and displayed “Invalid position”.

Problem 2 :

1. **Problem:** Difficulty deleting a node by value.
Solution: Searched for the value and changed the links to remove the node.
2. **Problem:** Difficulty printing the list in reverse.
Solution: Used recursion to print the nodes from last to first.
3. **Problem:** Maintaining the original queue after reverse printing.
Solution: Reverse printing only follows the links and does not modify them.
